Claim 58 (previously presented): The method of Claim 52, which includes enabling the player to transfer a third portion of the current displayed total of the credit meter to a different gaming device.

Claim 59 (previously presented): The system of Claim 34, which includes a ticketing system accessible through the gaming devices.

The following changes to the drawings have been approved by the examiner and agreed upon by applicant: The drawings should include an account remote from the gaming device as one of the cashout options. In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

The following is an examiner's statement of reasons for allowance: A thorough search for prior art fails to disclose any reference or references, which taken alone or in combination, teach or suggest, in combination with the other limitations, "simultaneously displays at least two different payout options" in combination with "simultaneously enabling the player to select the first amount and the second amount."

The closest prior art is Walker (US 6,168,522). Walker discloses a gaming device in which a dispensed amount may be credited to an account and paid to the player. However, Walker discloses this feature based on the winnings from a play of the game and not the general total credit meter. Thus, Walker structurally and functionally lacks the means for providing a gaming device in which the player may cash out the general

total credit meter in two, simultaneously displayed, options for which the amount for each may be selected by the player on the same display. For at least these reasons, claims 1, 22, 34, 52 and the claims dependent thereon are allowed over Walker or any other prior art of record, taken alone or in combination.
